Subject: Selection of Foundation Construction Company

To whom it may concern:

When we found out we needed a Foundation Construction Company we were determined to pick the best company available. We were not going to settle for an "average" company. Thousands of dollars were involved and we were going to make sure it was well spent.

We set up an analysis format to review a number of companies to simply determine which one was the best. After all, this was our home. In this analysis we considered proper licensing of personnel, personnel itself, demonstration of the work to be done, equipment, means of communication, track record and other considerations.

On a scale of 1 to 10, Secure Foundations scored the highest with a 9. The nearest competitor had a 7. We also had one Company that scored a 5. With this result we chose Secure Foundations to do the job.

After Secure Foundations completed the job we reflected on the wisdom of our decision.

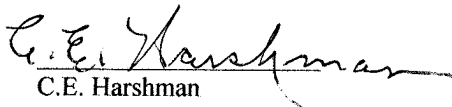

David Toler, Senior Consultant, was the first person from Secure Foundations to greet us. He gave us a resounding welcome. David completely explained the Engineering Report on the condition of our property we received. He also explained the necessary work to be done. David was the voice of Secure Foundations. He kept us completely informed as to what was happening at all times. If we had a problem or question we called David.

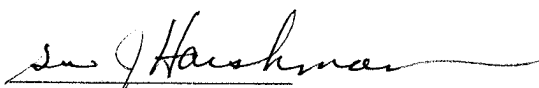

Jim Alexander, Owner-State Certified General Contractor, was the most knowledgeable person we could find in this area for this construction project. We felt that his expertise was superior. He was excellent in explaining to us the work to be done.

Secure Foundation Systems are staffed throughout with very competent personnel but the two we depended the most on were David and Jim.

Secure Foundations lived up to everything they promised including keeping the yard clean on a daily basis.

If you want the very best for your property you should select Secure Foundations. We did and are very proud of the results we received.
